

SIP trunking

REDEFINING VOICE & DATA SERVICES.

Evolving SIP technologies means **greater value** for our customers. With USAD's secure, Tier 1 network, we can help you find efficiencies by converging voice and data. By combining your T1 voice pipe and dedicated internet access pipe into one, you reduce loops, installation and the management of two networks.

Get the **security and reliability** you deserve with our owned and operated voice and IP networks. We provide failover protection without dropping calls. By utilizing the best practices for SIP voice network, we ensure the security of our network. Customer connections are protected by multi-layer router and SBC security practices.

With USAD's SIP Trunking, you'll get local and long distance phone service with optional toll-free functionality, shared capacity to avoid overload and a private backbone for enhanced security.

Bottom line: we'll **decrease your costs** by eliminating the expense of managing separate voice and data pipes. We'll also **increase your efficiency** through better allocation of personnel resources.

Let us redefine your voice services today and maximize your investment.

The more you get, the more you save with our multi-service discounts.

“secure Tier 1 network”

“failover protection
without dropping calls”

“shared capacity to
avoid overload”

“a private backbone for
enhanced security”

“USA Digital made our migration from TDM to SIP very easy and successful.”
